

Duo Filtration Project

Since 2019 we have successfully managed the Specsavers groups decision to save mains water and reduce the amount of microplastic entering our waste water system

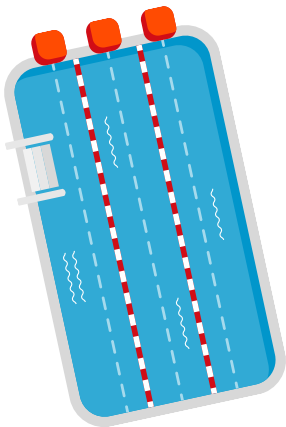

Each year Specsavers labs collectively save:

8,339,820 litres of water =
over 3 Olympic sized
swimming pools

4.5 tonnes of plastic = 2.5
Hippo's

**All this for less
than 2p per lens!**

Water Conditioner

The use of Water Conditioner within the filtration system helps to maintain the water quality and aids in the filtration.

Many factors can affect how well the socks filter and one of the best ways of controlling these is with the use of conditioner.

The conditioner helps to:

Maintain the pH level of the water

Break down the chemicals within the lens coatings

Keep contamination of the water down

Prolong the life of the filter socks

Reduce pressure on the socks
